PROFESSIONAL SUMMARY

Laravel Developer with **2+ years of professional experience** in web application development. Skilled in PHP, Laravel, MySQL, REST APIs, WebSockets, Laravel Reverb, queue processing, AWS S3, localization, and third-party API integrations. Experienced in building and maintaining scalable applications across real estate, marketplace, and enterprise domains.

TECHNICAL SKILLS

Languages & Frameworks: PHP · Laravel · Java · Python · Node.js · Express · React.js

Backend & Database: MySQL · MongoDB · REST APIs · JWT Auth · jQuery · JSON · SQL

Real-time & Async: WebSocket · Laravel Reverb · Redis/Caching · Queues & Jobs · Push Notifications

Integrations: OpenAI API · Payment Gateways · Email Systems · XML Processing

Tools & Platforms: Git · GitHub · Postman · VS Code · XAMPP · Laragon · Linux

PROFESSIONAL EXPERIENCE

Laravel Developer · Amcodr IT Solution, Ahmedabad

Apr 2024 – Present

Marketplace Platform (OLX-style Buy/Sell Application)

- Architected and delivered a **full-stack OLX-style** marketplace with **60+ RESTful APIs** — covering user registration, product listings, location-based feed, **wallet system, subscription/listing plans**, and order flows; all APIs documented via **Swagger** and tested on **Postman**.
- Built a **real-time chat system** using **WebSocket** & Laravel Reverb — supports text, image, and file (PDF) sharing between buyers and sellers with **zero-refresh UX**.
- Engineered push **notifications via FCM tokens** and real-time in-app alerts using **Laravel Events, Observers**, and **Queues** for asynchronous background processing.
- Developed a **full Admin Panel handling** product moderation, user verification, **wallet top-up** management, and data reporting with PDF & Excel export functionality.
- Implemented **wallet & subscription** system — users select monthly/yearly **listing plans**, charges deducted from wallet on product upload, integrated top-up flow end-to-end.
- Built against client-provided Figma designs, integrated **Sanctum authentication** and coordinated API contracts with Flutter frontend team.

Stack: *Laravel, PHP, MySQL, WebSocket, Laravel Reverb, Redis, FCM, Sanctum, Swagger*

Sixtiva (Real Estate Admin Platform)

- Independently developed a complete **real estate management platform** — admin panel, property listings, user management, and a client-facing website — delivered end-to-end without external support.
- Integrated **AWS S3** for cloud-based media storage — handling **property images, walkthrough videos, and PDF brochures** with secure upload, retrieval, and lifecycle management at scale.
- Implemented role-based access control using **Spatie** — managing admin, agent, and client **permission layers** with fine-grained feature access across the entire platform.
- Developed a **property enquiry management system** — tracking lead status, follow-up schedules, and enquiry-to-conversion pipeline with **real-time** admin reporting dashboards.
- Designed and built a responsive client-facing **property listing website** with advanced **search filters** (location, price range, property type) and dynamic listing pages.
- Built a **scheduled notification engine** that dispatches targeted alerts based on property activity, enquiry timelines, and agent-defined triggers using **Laravel Task Scheduling**.
- Managed complete **project lifecycle independently** — from requirement gathering and database schema design to deployment — ensuring on-time delivery with zero critical production bugs.

Stack: *Laravel, PHP, MySQL, Blade, Bootstrap, Spatie, Task Scheduling*

Idealista (XML Data Import/Export & AI Enrichment System)

- Designed a high-throughput **XML data pipeline using Laravel Queues & Jobs** capable of processing lakhs of records asynchronously — eliminating timeouts and ensuring 100% data integrity.
- Integrated **OpenAI API** for automated content generation — enriching product titles, descriptions, and metadata from raw imported **XML data** with no manual effort.
- Built a **bulk-edit & scheduled export UI**: users can select imported records, update fields (title, description, reference ID), schedule a publish date/time — system auto-exports the clean dataset on trigger.

- ▶ Developed a scheduled **export engine** — users configure a publish date/time, and the **system auto-exports** a clean, validated dataset on trigger without any manual intervention.
- ▶ Engineered **queue-based job monitoring** with retry logic and failure handling — ensuring pipeline resilience and visibility into **import/export job** status via admin dashboard.
- ▶ Optimized **database performance** for large-scale imports using chunked processing, **indexed queries**, and batch inserts — maintaining system responsiveness under heavy data loads.
- ▶ Delivered **end-to-end as sole developer** — schema design, queue architecture, **OpenAI prompt engineering**, bulk-edit UI, and automated scheduler — with full production deployment.

Stack: *Laravel, PHP, MySQL, Queues/Jobs, OpenAI API, XML Processing, Blade*

NOTABLE PROJECTS

Generum (AI-Based Clothing Recommendation System — Client Project)

- ▶ Delivered a **production-ready AI shopping assistant** end-to-end for a paying client — recommendation engine maps user attributes (gender, skin tone, height, hair type) to curated product suggestions.
- ▶ Designed all REST APIs for input handling, product display & order placement; built **responsive UI with secure login, cart & dynamic recommendations** with iterative client feedback cycles.
- ▶ Handled complete client communication cycle — **requirement gathering**, iterative demos, feedback integration, and final delivery — as a solo developer on a live commercial project.

Stack: *PHP, MySQL, JavaScript, Bootstrap*

INTERNSHIP

Java Developer Intern · Signimus Technologies Pvt. Ltd, Indore

Jan 2024 – Apr 2024

- ▶ Developed Java-based backend modules using **JDBC & MySQL** — built and tested CRUD operations for a Library Management System covering book inventory, member registration, and issue/return workflows.
- ▶ Designed and implemented **REST APIs** with basic authentication — following **MVC architecture** pattern and contributing to legacy system refactoring for improved code maintainability.
- ▶ Gained hands-on experience with Java OOP principles, SQL query optimization, and structured **backend development** practices in a professional team environment.

EDUCATION

AKS University, Satna, Madhya Pradesh

Master of Computer Application

Aug 2022 – May 2024

CGPA: 8.06/10.00

CERTIFICATIONS
